Give BIOwaste a second chance

From 2022, you can apply for a BIO bin for vegetation biowaste free of charge. We really appreciate your interest in sorting biowaste. Thanks to you, we obtain quality plant material, which then returns to the soil in the form of compost and enriches it with valuable nutrients and organic matter.

What belongs and does not belong in the BIO bin

✓ YES	✗ NO
grass, leaves, weeds, clippings	all types of bags **
fruits remnants, vegetables, plants	packaging materials, glass
teabags *, coffee grounds	animal based kitchen leftovers, eggshells
flowerpot soil	dairy products, fats, oils
turf with soil	animal excrement, dead animals
twigs, wood chips from the branches	feathers, hair, fur
sawdust, shavings, bark	soiled sawdust, shavings, bedding
hay, straw	stones

* only paper teabags, not artificial fibre teabags

** bags, even biodegradable, decompose too slowly or not at all, and then the biowaste compost contains unwanted ingredients

What will happen to biowaste from BIO bins?

- Biowaste from the containers is taken to composting plants for processing and then returned to the soil.

Cleanliness is key

- The building owner or facility manager is responsible for the cleanliness of the container's contents.
- With a larger number of households in the building, we will supply you with a container with a lockable lid.
- If something is in BIO bin that shouldn't be there, the container's contents will not be emptied.
- An unemptied container is immediately marked with a sticker with a contact for the collection company.
- You can remove the polluting items yourself or order an extra pick-up at your own expense.
- Repeated soiling may result in the container's removal.

How to order a free BIO bin or request a change?

- Electronically at: <https://bio.praha.eu/formular>
- Personally, at the collection company's customer centre that provides the service in your area.
